

How to connect your [Chromebook](#) to Wi-Fi

Before you can connect to Wi-Fi, you'll have to enable it. Here's how to do it:

1. In the bottom-right corner of the screen, click into the area with the Wi-Fi symbol (if it isn't enabled, you'll see an outline without an available signal inside).
2. Click "Not connected" — you'll see the Wi-Fi button turn on and it will automatically search for local networks.

Click on "Not connected" to search for Wi-Fi networks. Devon Delfino/Business Insider

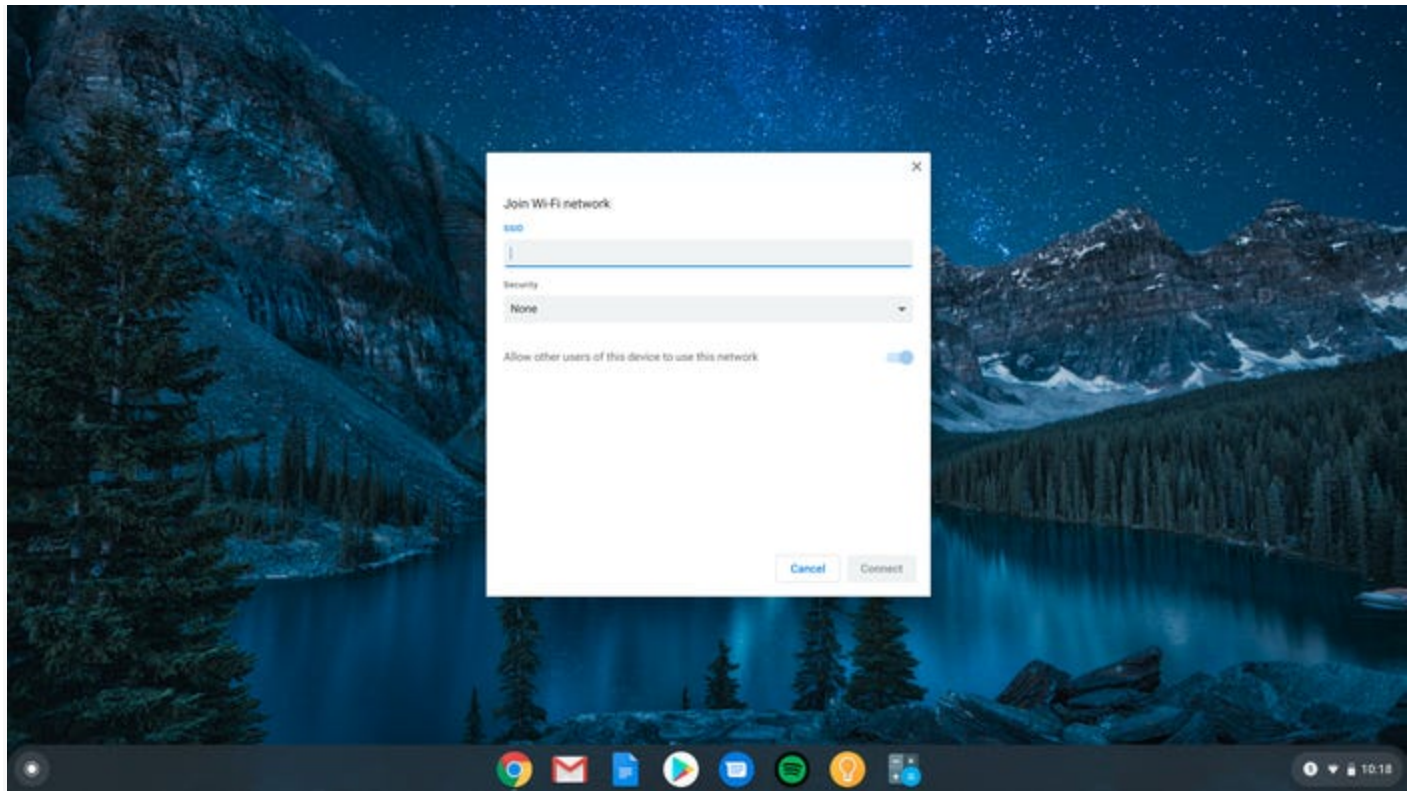

3. If you've already established a local Wi-Fi connection, it should automatically connect. Otherwise, select one from the available list and enter the password, or click the Wi-Fi button with the plus sign

(next to the place where you would toggle the Wi-Fi on or off) to join another network.

Click on the Wi-Fi icon with a plus sign if you don't see your network. Devon Delfino/Business Insider

4. Enter the SSID of the network you want to join, then enter the password, if necessary.

Enter the SSID and password for the network. Devon Delfino/Business Insider

If you're having trouble connecting to Wi-Fi, you may need to [restart your Chromebook](#), or think about getting a new router if your connection is weak. [Google Wi-Fi](#) offers one of the best connections for a standard home, and will go perfectly with your [Chromebook](#).
